# Priority areas of Lithuania for the S3 Strategy 2021-2027

ECCP (2023). Own elaboration based on <https://s3platform.jrc.ec.europa.eu/region-page-test/-/regions/LT#s3priorities>

# Overview of Lithuanian Clusters registered on ECCP

## Agri-food Clusters:

- AgriFood Lithuania DIH
- Food Technologies Digitalization LT
- National Food Cluster Lithuania
- SMART food cluster

ECCP (2023), own elaboration based on <https://reporting.clustercollaboration.eu/all>

# EU Farm to Fork Strategy

The strategy focuses on four main areas:

- **Sustainable production:** reduce the environmental impact of food production by promoting sustainable farming practices, such as organic farming and agroecology.
- **Healthy diets:** encourage people to eat healthier diets, with more fruits, vegetables, and whole grains.
- **Fair food chains:** ensure that farmers and other actors in the food chain are fairly rewarded for their work.
- **Smart food consumption:** reduce food waste and promote the circular economy in the food sector.

[https://www.europarl.europa.eu/RegData/etudes/ATAG/2020/646132/EPRS\\_ATA%282020%29646132\\_EN.pdf](https://www.europarl.europa.eu/RegData/etudes/ATAG/2020/646132/EPRS_ATA%282020%29646132_EN.pdf)

[https://food.ec.europa.eu/horizontal-topics/farm-fork-strategy\\_en](https://food.ec.europa.eu/horizontal-topics/farm-fork-strategy_en) (last access 17.10.2023)

# Implications of EU Farm to Fork Strategy

- new opportunities for agrifood businesses that can provide the **inputs and services that farmers need to adopt sustainable farming practices.**
- new opportunities for agrifood businesses that can **produce, market and distribute healthier foods** ( with more fruits, vegetables, and whole grains).
- new opportunities for agrifood businesses that can help to **ensure that farmers are paid a fair price** for their products.
- New opportunities for circular economy business that help **reduce food waste and valorize** it (e.g. waste-to-X)

# Challenges to the agri-food ecosystem

- **Climate change:** Climate change is already having a significant impact on the agri-food sector, and this impact is expected to worsen in the future. Climate change is causing more extreme weather events, such as droughts, floods, and heat waves, which are making it difficult for farmers to produce food. Climate change is also causing pests and diseases to spread more easily, which is further threatening food production.
- **Water scarcity:** Water scarcity is another major challenge facing the agri-food sector. Water is essential for food production, and as the world's population grows, the demand for water is also increasing. This is putting a strain on water resources, and in some areas, water scarcity is already a major problem.
- **Soil degradation:** Soil degradation is the loss of soil quality due to erosion, compaction, nutrient depletion, and other factors. Soil degradation is a major challenge for the agri-food sector, as it can reduce crop yields and make it more difficult to produce food.
- **Increasing food prices:** Food prices have been rising in recent years, and this trend is expected to continue. This is due to a number of factors, including climate change, water scarcity, and soil degradation. Rising food prices are making it difficult for people to afford food, and this is a major concern for food security.

# Challenges to the agri-food ecosystem

- **Increasing demand for food:** The world's population is expected to grow to 9.7 billion by 2050, and this will put a strain on the agri-food sector. The agri-food sector will need to find ways to increase food production in order to meet the needs of a growing population.
- **The rise of antibiotic resistance:** Antibiotic resistance is a major problem in the agri-food sector. Antibiotics are used to treat sick animals, but they are also used to promote growth in livestock. The overuse of antibiotics is leading to the development of antibiotic-resistant bacteria, which can pose a serious threat to human health.
- **The spread of zoonotic diseases:** Zoonotic diseases are diseases that can be transmitted from animals to humans. The spread of zoonotic diseases is a major concern for the agri-food sector, as it can lead to outbreaks of serious diseases, such as bird flu and swine flu.
- **The loss of biodiversity:** The agri-food sector is responsible for the loss of biodiversity. The intensive farming practices that are used to produce food are destroying natural habitats and driving species to extinction. The loss of biodiversity is a major threat to the sustainability of the agri-food sector.

# Areas for Research, Development and Innovation

- **Climate-smart agriculture:** Climate-smart agriculture is a set of practices that help to mitigate and adapt to climate change. These practices include using drought-resistant crops, improving irrigation efficiency, and using cover crops.
- **Water-efficient agriculture:** Water-efficient agriculture is a set of practices that help to conserve water. These practices include using drip irrigation, planting drought-resistant crops, and using rainwater harvesting.
- **Soil health:** Soil health is essential for food production. Research and development should focus on improving soil health through practices such as crop rotation, cover cropping, and no-till farming.
- **Resilient food systems:** Resilient food systems are able to withstand shocks and stresses, such as climate change and extreme weather events. Research and development should focus on developing resilient food systems through practices such as diversifying crop yields, storing food locally, and using climate-resilient infrastructure.

# Areas for Research, Development and Innovation

- **Sustainable aquaculture:** Aquaculture is the farming of aquatic organisms. Research and development should focus on developing sustainable aquaculture practices that reduce the environmental impact of fish farming.
- **Precision agriculture:** Precision agriculture is the use of technology to improve agricultural practices. Research and development should focus on developing precision agriculture technologies that can help farmers to reduce their inputs and improve their yields.
- **Alternative proteins:** Alternative proteins are proteins that do not come from animals. Research and development should focus on developing alternative proteins that are affordable, nutritious, and sustainable.
- **Climate change and pest resistant** new crops and livestock breeds.
- New technologies for **managing pests and diseases.**
- New ways to **store and transport food.**
- New ways to **educate consumers** about the importance of sustainable food production.
- **Mitigation of Agricultural Greenhouse Gases**

# Evolution of Research Papers on FtoF

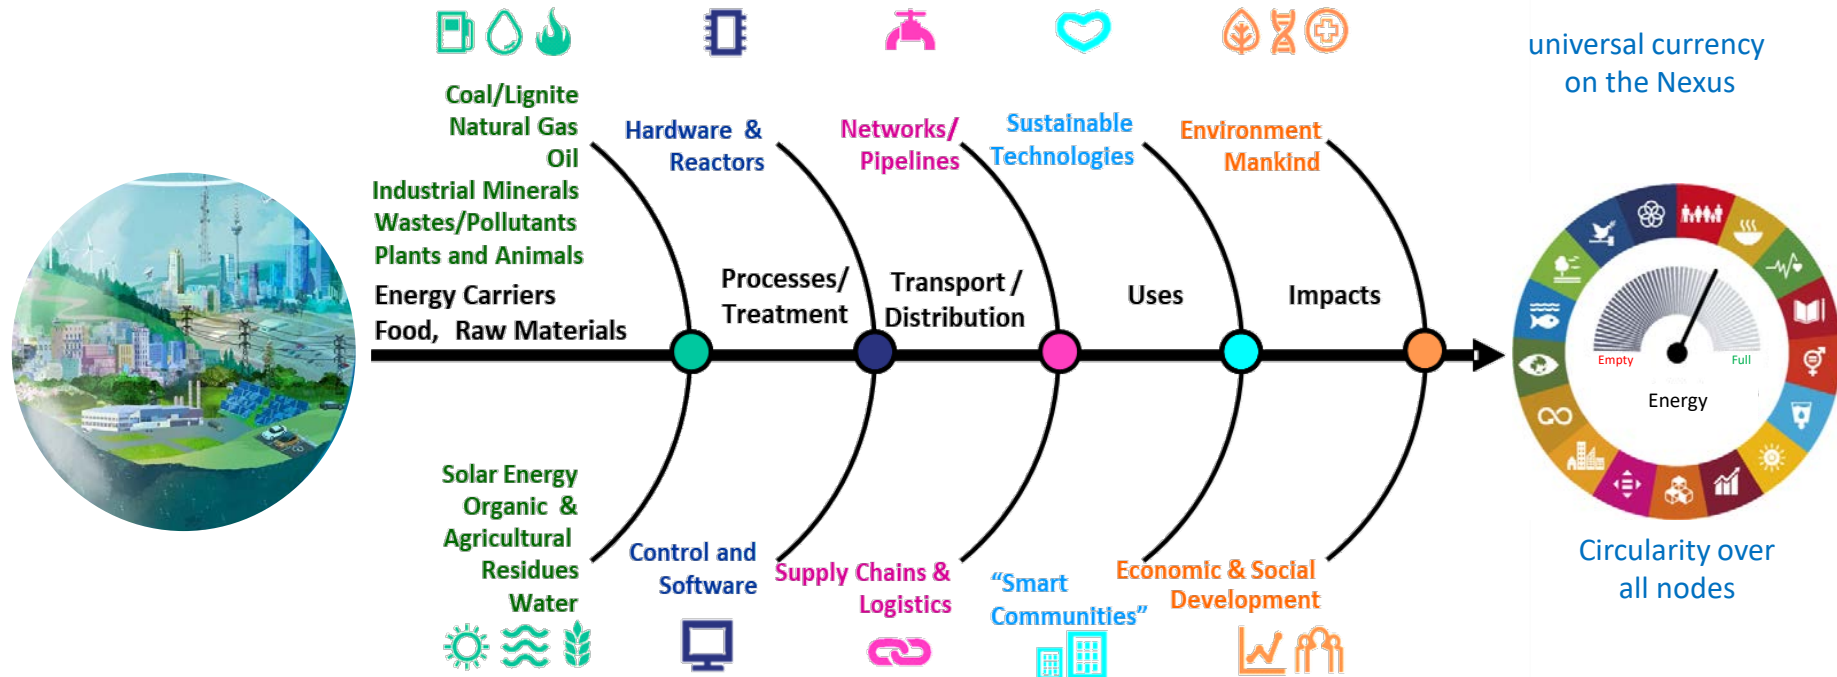

Source: ECCP (2023), based on research from the CHORUS Cluster

# Global Considerations

- Nexus nature of the challenges / Interdependencies
- Need for a holistic/synergetic framework:
  - ✓ **Unified view** of raw materials, increase **local sourcing**
  - ✓ **Distributed** processing, “edge manufacturing”, scale-up by **modularity**
  - ✓ **Resilience** exploiting network & complexity science for latent potentials /criticalities
  - ✓ Exploit **synergies** to foster sustainable use within **symbiotic** (“smart”) communities
  - ✓ Assess **multidimensional impacts** on environment, society and economy

# The Resource NEXUS: sustainability, resilience and project building

<https://ec.europa.eu/jrc/sites/jrcsh/files/20141021-certh-jrc-conference-konstandopoulos.pdf>

- **Unified view** of raw materials, increase **local sourcing**
- **Distributed** processing, "edge manufacturing", scale-up by **modularity**
- **Networks** & complexity science, latent potentials /criticalities, **resilience**
- Exploit **synergies** to foster sustainable use within **symbiotic** ("smart") communities
- Assess **multidimensional impacts** on environment, society and economy

**Team Leader – Cluster Policy, DG GROW, European Commission**

# A range of options for EU clusters to engage in projects development

## EU funding can be used:

- **THROUGH** clusters channelled to final recipients, in particular SMEs (like Innosup-1 projects with cascade funding) (or Euroclusters)
- **WITH** clusters to provide specialised services to any economic actor in need e.g. technological advise, upskilling , access to finance)
- **BY** clusters to mix private and public, align local, regional, national and EU funding, reach out to financial providers across EU territory
- **FOR** clusters to build their capacity to facilitate collaboration, capitalise technological and market intelligence, offer services

# EU funded projects should implement EU priorities

## Lead Green Transition

Emission reductions  
Resource efficiency  
Clean energy and mobility  
Circularity  
Waste prevention  
Bioeconomy/Biomaterials  
Renewables  
Biodiversity  
Green procurement

## Accelerate Digital Transition

Artificial Intelligence  
Industry 4.0/5.0  
Internet of Things  
Blockchain  
Data/Cybersecurity  
Chips Act  
Digital Service/Market Acts  
E-government  
E-skills  
Broadband/5G

## Build Resilience

Industrial ecosystems  
Single Market  
Global Value chains  
Strategic dependencies  
Critical raw materials  
Critical Technologies  
Supply chains disruptions  
Diversified Markets  
Reskilling/Upskilling

## The European Commission's priorities

The European Green Deal

A Europe fit for the digital age

An economy that works for people

A stronger Europe in the world

Promoting our European way of life

A new push for European democracy

## Horizon Europe's first strategic plan 2021-2024: Commission sets research and innovation priorities for a sustainable future

- Promoting an open strategic autonomy by leading the development of key digital, enabling and emerging technologies, sectors and value chains;
- Restoring Europe's ecosystems and biodiversity, and managing sustainably natural resources;
- Making Europe the first digitally enabled circular, climate-neutral and sustainable economy;
- Creating a more resilient, inclusive and democratic European society.

# Our Vision

The EU's key funding programme for research and innovation:

- Tackles climate change
- Helps to achieve the UN's Sustainable Development Goals
- Boosts the EU's competitiveness and growth
- Facilitates collaboration and strengthens the impact of research and innovation in developing, supporting and implementing EU policies while tackling global challenges
- Supports the creation and better diffusion of excellent knowledge and technologies
- Creates jobs, fully engages the EU's talent pool, boosts economic growth, promotes industrial competitiveness and optimises investment impact within a strengthened European Research Area.

# Leading questions for your discussions

## Synergies and opportunities among the participants

- What is the **business and technological mission** of each organisation?
- What are the **challenges** that you would like to address?
- What is a common **objective** for all the organisations (operational goals)? What do you want to achieve?

## Analysis of options

- What are the different **options** to achieve the common goal? Analyse them.

## Evaluation and selection

- Assess the **feasibility** of the best options according to the organisations' needs, skills, and resources, considering the operational structure of the organisations, their regional topology, and infrastructure.
- Select the **preferred option**, taking into account the strategic, financial and societal value created and the risks.
- Financial projection: **What** do you need and **how** do you want to fund the project?

## Implementation strategy

- Determine the **activities** to achieve the business objectives.
- Determine the **resources** and **involvement** of the partners, processes, technologies needed, and platforms to be used.
- Determine the desired financing **source**.
- Determine the desired **milestones** of the project.

## Next steps

- Define the **next steps** for the further development of the project after the C2lab.

# RESULTS

# Stay in contact via the C2Lab group

The screenshot shows a LinkedIn group page for 'C2Lab Community Discussion Group'. At the top left is the European Union flag. The main header features the C2Lab logo (a stylized 'C' with a star and '2' above it) and the text 'LAB Cluster Collaboration Labs'. Below the header, the group name 'C2Lab Community Discussion Group' is displayed. The description reads: 'Boost your collaboration with other clusters to stimulate and scale-up inter-regional cooperation in new cross-border value chains.' Below this, it states: 'This group is open to everyone who is registered on the ECCP platform and interested in C2Lab.' At the bottom of the page is an orange button with the text 'Join now!'.
