

Technology Centres in Key Enabling Technologies (KETs)

The European Commission updates the [Mapping of Technology Centres](#) in [Key Enabling Technologies](#). The mapping is part of the European Commission's policy to promote collaboration between Technology Centres in Key Enabling Technologies in Europe and to facilitate SMEs' access to technology services across Europe. The mapping is a basis for informing policy makers and for policy activities (see for example the [Call INNOSUP-03-2017](#) under Horizon 2020). It is coordinated with the work on [Digital Innovation Hubs](#).

APPLY

Use your EU login (or create one) to register and fill in the questionnaire (20 minutes maximum). If necessary, more explanations are given in the [User Guide](#), pages 20 to 28. Please check the criteria for this mapping:

BENEFIT

SMEs and innovation players like clusters, EEN, regional agencies can find contact persons for technology services and expertise anywhere in Europe. Technology Centres in the mapping increase their visibility and benefit from networking activities (invitations to events, workshops to discuss future collaboration opportunities).
