Baltic Science Network transnational seminar
**New Tools for Spreading Excellence
and Widening Participation
in Research and Innovation Programmes**

16 November 2017, Tallinn, Estonia

Venue: Art museum of Estonia / KuMu (Weizenbergi Street 34)

Estonian Ministry of Education and Research is delighted to announce the transnational seminar of the Baltic Science Network „**New tools for spreading excellence and widening participation in research and innovation programmes**“ contributing to the Estonian Presidency of the Council of the EU on **November 16, 2017 in Tallinn**.

The event is part of Baltic Science Network programme that is aimed at discussing the most promising solutions to help increase the participation of moderate innovators in research and innovation initiatives implemented in the European Research Area. The Network is connecting the targeted multilateral activities in the frame of research and innovation excellence, mobility of scientists and expanded participation. The current event is focussing on widening participation in research and innovation programmes.

The European capacity to address societal challenges does not depend solely on the innovation front-runners. This is a shared responsibility to be addressed at both the Member States´ and the EU level. Balancing the overall engagement among the Member States, in full accordance with each country´s performance, will maximise the overall impact of research and innovation investments across Europe. Therefore, this event is dedicated to encouraging consultations and enhancing collaborative ties between innovation hubs and promising research centres, specifically in the Baltic Sea Region. Several survey results introduced during the seminar will contribute to the discussions on widening participation. Possibilities to decrease the research and development performance divide in the EU and regional science and innovation programmes, enhancing the commitments of regional institutions to widening in Horizon 2020 and of the Commission to widening in regional activities are also in scope of the seminar.

The seminar will gather a distinguished set of speakers. The key-note speech is delivered by **Dimitri Corpakis**. The sessions focus on macro-regional experience in widened participation
