

The main area of our activity is **metalworking**,
but we also carry out orders for plastics
processing.

TECHNICAL CAPABILITIES

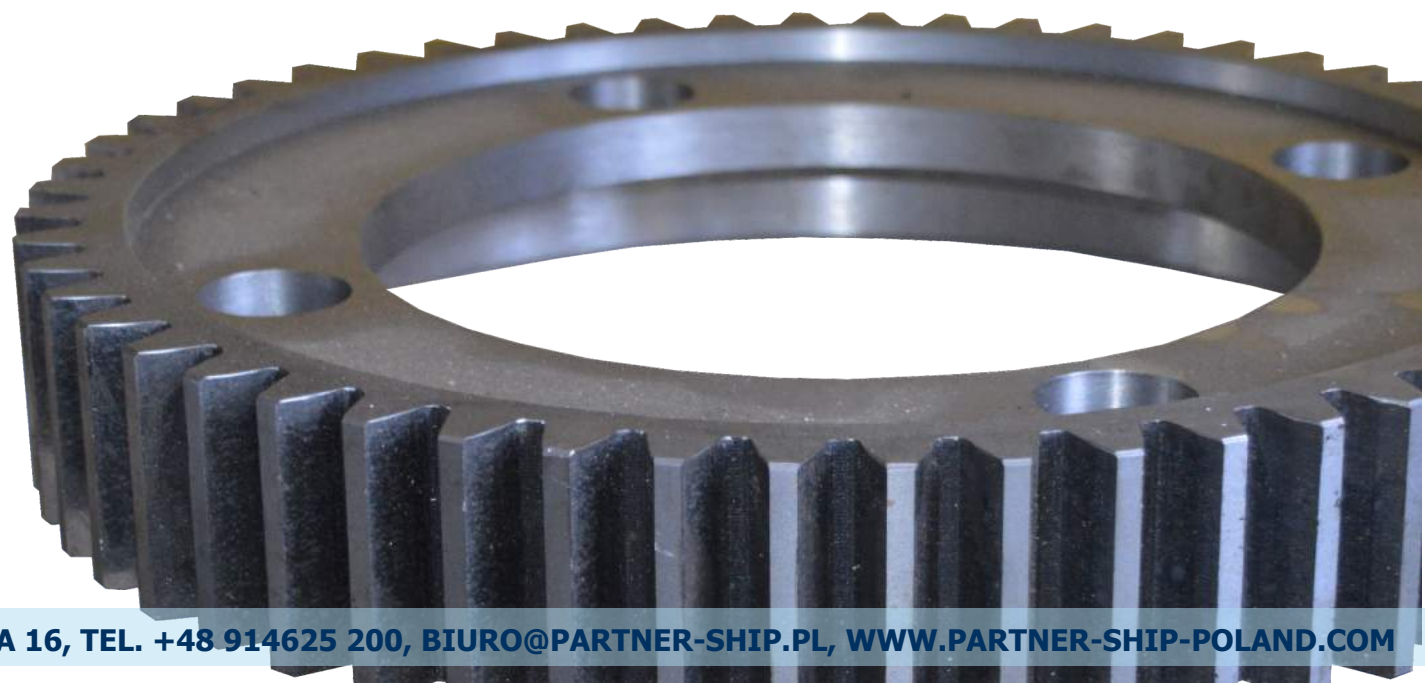

The combination of our machinery park and optimally selected technology, guarantees the highest quality products and services in both the piece production and series production. Our company has got machinery park consisting of just under 100 machines for machining, with full instrumentation and well-equipped tool warehouse. The workshop largely consists of conventional machines, but we also have numerically controlled machines (CNC). The wide range of possibilities is owed to such machines as: lathes, milling machines, boring machines, shaft grinding machines, surface grinders, tool grinders, slotting machines, hobbing machines, planing machines, presses, cutters, saws, drills, threaders and honing machines. We also have a material warehouse, quality control department, finished product warehouse, employee lounges and offices, cargo handling equipment as well as our own means of transport. All of the above is located in a facility of the total area equal to 2000m²

METALWORKING
plastics processing

Types of work that we are able to perform using our facilities:
lathing, milling, grinding, threading, slotting, planing,
hobbing milling, cutting, drilling, welding,
repairs of industry machinery

COOPERATION ABILITIES

In the market economy competition is a universal phenomenon, but nowadays companies are increasingly in need of operation coordination and cooperation. This has always been our business philosophy: on the one hand, regular market competition, on the other hand, cooperation focused on mutual benefits. What differentiates us from our competitors is professional customer service and comprehensive services performance. We make every effort to meet customers' expectations, because they are the ones generating turnover in our company. We consider customer's satisfaction as being the most important. Because the main sector of our customers is composed of ship owners and industrial companies, we adapted our offer to their needs. Therefore we've made a name for ourselves on the market by offering flexible deadlines for service completion. Bearing in mind the above advantages we are constantly striving to improve our service quality.

Work types, which we're able to do in cooperation with other entities:

WORKS INVOLVING METALWORKING: A number of services that exceed our technical capabilities, on account of highly developed cooperation abilities.

ELEMENT UPGRADING AND MAINTENANCE: Galvanic zinc plating or hot-dip galvanizing, chrome plating, chemical or thermal improvement, repainting.

RENOVATIONS OF SHIP DEVICES: Comprehensive renovations of the main engines and generators, centrifuges, pumps, air compressors, pipe and plate coolers, heaters, valves, electric motors and generators, anchor and mooring elevators, and much more.

TRANSPORT AND LOGISTICS

PARTNER-SHIP distributes its products through strong and regular transport connections. We deliver our products regardless of the size and location of their destination. Our company offers comprehensive services in FTL, LTL transport in national and international scope. We provide transportation of our goods by all kinds of vehicles and trailers, including difficult individual orders based on specific needs of our customers. Express transport is also an important part of PARTNER-SHIP's business activity. We offer express services using dedicated vehicles. This system ensures promptness as well as flexibility of our services.

WE GUARANTEE:

- promptness and transport security,
- monitoring at every stage of transport services,
- an individual and professional approach to each client and order,
- assistance in choosing the best transport solutions.

We are dynamic and we respond swiftly to changes. Thanks to many years of our operations, we have the know-how and experience that bring tangible benefits to the customer.

INDUSTRY SECTORS

A variety of machines and staff versatility give us wide ranging capabilities. Typical works performed by PARTNER-SHIP for the **shipbuilding industry** include manufacturing of new elements and regeneration of used elements such as: bolts, rollers, handles, hinges, hold closing hatches, roller fairleads, wedge closings, screw closings, hatches, winches, rope drums, gangways, anchor winches, anchor-mooring winches, gears, worm gears, shafts, rudders, screws, pistons, connecting rods, cylinder heads, pneumatic and hydraulic manifolds, actuators, and other elements made of metal and plastic.

For **harbour industry** we make a lot of new and we regenerate old elements such as: transport baskets, traverses, carriages for forklift trucks, rolltrailers, bolts, rolls, cable drums, gears, worm gears, conveyors, shafts, cylinders, grippers, bale grippers for bulk cargo, grapples for scrap, buckets for excavators and other elements made of metal and plastic.

Construction industry is growing rapidly and has a very wide range of different construction equipment types, which constantly suffers from wear.

We also realize orders for **power engineering industry**, **petroleum industry**, **military industry**, **mining industry**, **railway industry**, and the rest of the **machining industry**. In every industrial sector there is crane equipment, i.e. transport machines dedicated for handling heavy object` at short distances intermittently. These include such devices as: cranes, overhead cranes, hoists, trolleys, stacker cranes, etc. Apart from them there are still a lot of other machines and devices used in all industry branches.
